SUMMARY

Industrial and Production Engineering graduate from BUET combining operational problem-solving with proven leadership, founded and grew an education venture from the ground up, led a cross-functional team through prototype manufacturing, from concept to functional output, and delivered a **33.89%** process time reduction during an industrial attachment at Rancon Automobiles. Strong analytical foundation in supply chain optimization and quality management, seeking to bring structured, data-driven decision-making to a management trainee role.

EDUCATION

B.Sc. in Industrial and Production Engineering — **Graduated: June 2026**
Bangladesh University of Engineering and Technology (BUET) | CGPA: **3.45/4.00**

Higher Secondary Certificate (HSC) — **2018-2020**
Uttara High School and College, Uttara, Dhaka-1230 | **GPA- 5.00/5.00**

WORK EXPERIENCE

Industrial Attachment: RANCON — Nov 2025 - Dec 2025

Rancon Auto Industries Ltd. (RAIL)

- Analyzed the **Mitsubishi Xpander** assembly flow (task sequence, material handling, space constraints) and proposed merging the rear axle assembly with the engine assembly to remove a bottleneck, improving flow and cutting total process time by **33.89%** and improving floor space utilization by **10%.**
- Identified and documented specific motion waste in the Xpander line, proposing targeted layout changes to improve operator efficiency.
- Improved the SOP for the **JAC HFC1042 KD** assembly line by updating steps to match shop-floor reality and created a structured tool list to support faster, more consistent execution.

Rancon Motor Bikes Ltd. (RMBL)

- Conducted defect analysis using **Pareto charts** to isolate the vital few defect types driving most rework and rejects, enabling focused corrective actions and better prioritization on the shop floor.
- Performed **Process Capability Analysis (Cp/Cpk)** on brake force for two high-demand Suzuki motorcycle models and applied **Pareto analysis** to identify the vital few drivers of customer complaints, enabling targeted quality improvements across critical assembly stations.

PROJECTS

Multi-Purpose Plumbing Machine (Product Design) - Team Lead
Led a team through the full product design cycle, assigning tasks based on individual skillsets to maximize efficiency, coordinated directly with the manufacturer to align design specs with production constraints, ensuring on-time delivery of a functional, modular prototype.

Smart Ammonia & Ambient Monitoring System (IoT) - Team Project
Co-developed an ESP-01S based monitoring system using MQ137 and DHT22 sensors with automated fan and buzzer control, dividing work across hardware integration, sensor calibration, and dashboard development to deliver a web dashboard for real-time data logging and threshold alerts.

SKILLS

Engineering & CAD: AutoCAD, SolidWorks, CATIA V5
Analytics & Simulation: Power BI, Excel, Python, MATLAB, Arena
IE Methodologies: Time Study, SOP Development, Process Capability (Cp/Cpk), Bottleneck Analysis

EXTRACURRICULAR ACTIVITY

Founder & Director | After Schools Academy

- Launched and independently scaled an educational venture providing affordable, need-based tuition models to the community.
- Managed all day-to-day operations, curriculum logistics, and scaled enrollment to **60+** active students.
